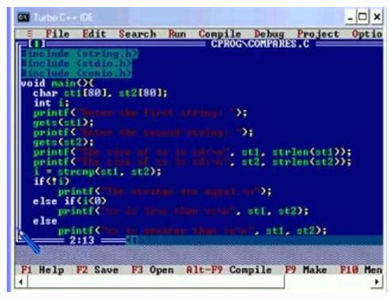
Scanf c manual



Ejercicios de scanf y printf en Lenguaje C

Ejercicio - Área de un Triángulo (en C)

Resumen con printf y scanf

Ejercicios con printf y scanf

En este tutorial vamos a crear un programa en C que calcule el área de un triángulo, para ello vamos a pedir al usuario que introduzca la base y la altura del triángulo, después calcularemos el área y mostraremos el resultado en pantalla.

En pantalla:

```
Introduzca la base: 5
Introduzca la altura: 10
```

Área: 25.000000 u^2

Solución del Ejercicio - Área de un Triángulo (en C)

Resumen con printf y scanf

Código fuente del programa:

```
#include <stdio.h>
int main()
{
  float altura, base, area;
  printf("Introduzca la base: ");
  scanf("%f", &base);
  printf("Introduzca la altura: ");
  scanf("%f", &altura);
  area = base * altura / 2;
  printf("El area del triangulo es %f", area);
```

Attributes See attributes (5) For the descriptions of the following attributes: Attribute Type Attribute Value Interface Interface Committee Committee MT-Level MT-Safe Standard See also SEM_INIT (3C), SEM_OPEN (3C), Attributes (5), Standards (5) Page 21 SEM_GETVALUE - Get the value of a Sinoxi traffic light #Include INT SEM_GETVALUE (SEM_T * LIMITS SEM, INT * LIMITS SVAL); Description The SEM_GETVALUE () function updates the referenced position from the SVAL argument to have the value of the traffic light referenced by SEM without hitting the status of the traffic lights. If the format is exhausted while the arguments remain, excess arguments are evaluated but are otherwise ignored. If the ReadFS argument is not a null pointer, point to a FD_SET type that specifies the file descriptors to be verified to be ready to read, and in output indicates which file descriptors are ready to read. If the priority of the process specified by the PID topic is set more than that of the process of execution of the lower priority and if the specified process is ready for execution, the process specified by the PID topic take a process of Highest priority execution. Eintr The SEM_OPEN () function has been interrupted by a signal. Attributes See attributes (5) For the descriptions of the following attributes: Attribute Type Attribute Value Interface Committee Committee MT-Level MT-Safe Standard See also SEM_INIT (3C), SEM_OPEN (3C), SEM_UNLINK (3C), Attributes (5) , Standards (5) Page 20 SEM_Destroy - Destroy a symaphory symaphore synopsis #include int sem_destroy (SEM_T * SEM); Description The Sem_Destroy () function is used to destroy the traffic light unnamed indicated by SEM. If O_EXCL is set and O_Creat it is not set, the effect is not defined. The seconds () functions, .enoisicerp .enoisicerp aippod a inoisrev itnednopsirroc elled itneiciffe ¹Âip onos e inoiznuf etseuq id alognis enoisicerp id inoisrev onos)(trevnoCGS e)(Array Elements Param [0-2] Specify XI, param [3-5] Specify the multiplier A and Param [6] Specifies the 16 bit Addend C. [Library ... This function provides for the definition of format strings that select arguments in an appropriate order to specific languages. The result of the reference to the copies of SEMs in calls at SEM_WAIT (3C), SEM_TRYWAIT (3C), SEM_POST (3C) and SEM_Destroy (3C), is not defined. h Specifies that a specified below d, i, or, u, x, x or n, applies to a topic with the short or short-marked pointer. The following flag bits can be set in OFLAG: O_Creat This flag is used to create a traffic light if it doesn't already exist. The only member required of parameters is sched_priority. The topic of the name points to a string that named a traffic light object. The next call to Getchar (3c) return the character a. The ERAND48 (), NRAND48 () and JRAND48 () functions require the call program to provide memory for subsequent XI values in the specified array as a topic when the functions are recalled. In the absence of a dimensions modifier, the corresponding argument must be an un signed int pointer. The sem_close function () Deallocates (ie, make available to reuse by a subsequent Seme_Open (3C) by this process) Any system resource assigned by the system for use by this process for this traffic light. Evervlow The traffic light value exceeds SEM_Value_Max. EnosPC A requested resource to initialize the traffic light was exhausted, or the resources have reached the limit on the Semaphori (SEM_NSEMS_MAX). Previously, %% Specifier accepted a character% from the input only if there were no previous characters. White spaces. Then BUF == "314" and * DECPT == 1 corresponds to the numeric value 3.14, while BUF == "314" and * DECPT == Â ¢ '1 corresponds to the value .0314. If a descriptor refers to a socket, the implicit output function is the SENDMSG (3xNet) function that provides a quantity of normal data equal to the value of the SO_SNDLOWAT option for the socket. The corresponding argument must be a pointer to the starting byte of an array of characters, signed characters, or unsigned characters large enough to accept the sequence. EINVAL The nfds Ã¨ argument is less than 0 or greater than FD_SETSIZE. For each file descriptor below nfds, the corresponding bit will be set to successful completion if Ã¨ was set to input and the associated condition Ã¨ true for that file descriptor. If the specified time interval expires without any required operation being ready, the function is returned. An Ã socket is considered to have an outstanding condition if a receive operation with O_NONBLOCK clear for the description of the open file and with the MSG_OOB flag set would return out-of-band data without blocking. The highest numeric values for priority are priorities higher. The filepctl_lookup() function returns a pointer to a filepctl_t structure if data for that thread or NULL otherwise was found. The corresponding argument must be a pointer to an array of wchar_t large enough to accept the resulting sequence of wide characters. The corresponding argument must be a pointer to an array of wchar_t large enough to accept the sequence and null end character, which will be added automatically. The sem_reltimedwait_np() Ã¨ function is identical to the sem_timedwait() function, except that the timeout Ã¨ is specified as a relative time interval. The select() function has no sigmask argument. Errors The function sched_rr_get_interval() will fail if: ESRCH Cannot find a job that matches the job specified by pid. (The function may return data, an end-of-file indication, or an error other than one indicating that it is blocked, and in each of Cases The descriptor will be considered ready to read.) A descriptor is considered ready for writing when a call to an output function with O_NonBlock Clear would not block, if or o The function would transfer the data successfully. For sem_reltimedwait_np (), the timeout expires when passing the time interval specified by REL_TIMEOUT, as measured by the clock_realtime clock, or if the time interval specified by REL_TIMEOUT is negative at the time of the call. Returned values If the operation fails, the Sched_RR_GET_InterVal () function returns 0 (protocol specification if the MSG_OOB flag will be used to read out of band data). We also consider that a socket has an exceptional outstanding condition if there is an out-of-band data mark in the reception queue. If PID is zero, the programming parameters will be set for the calling process. % corresponds to a single%; No conversion or assignment occurs. The value set in SVAL can be 0 or positive. Similarly, if the process that calls Sched_setParam () sets a priority of one's own lower than one or more other lists of non-empty processes, even the process that is the main element of the highest priority list prevents the calling process. To support 32-bit applications wishing to use a greater number of files opened with SELECT (), you can increase this dimension when filling out by providing a broader definition of FD_SETSIZE before the inclusion of any header provided by the system. Each function reads the bytes, interprets them according to a format and stores the results in the relevant topics. The use of a timeout does not affect the pending timers set by Alarm (2), UAlarm (3C) or Setitimer (2). The data used for preventing control are not copied to the son of a fork (2). In this case, the normal jump over the fonts of the empty space is deleted. A conversion specification is performed in the following steps: the fonts of the empty input space (as rep rep ovisulcni Âtiroirp id ollavretni'llen oserpmoc oretni nu ¨Ã marap_dehcs arutturts allen ytiroirp_dehcs orbmem led erolav lI .n o C ,c ,[enoisrevnoc id erettarac nu adulcni non enoisrevnoc id acificeps al ehc onem a ,itarongi onogner))C3(ecapsssi ad policy specified by the policy. ENOSYS The sem_init() function is not supported by the system. Attributes See attributes(5) for descriptions of the following attributes: ATTRIBUTES TYPE ATTRIBUTE VALUE Stability Interface Commit MT-Level MT-Safe Standard See also librt(3LIB), sched.h(3HEAD), sched_getparam(3C), sched_setparam(3C), sched_get_priority_max(3C), sched_getscheduler(3C), sched_setscheduler(3C), attribute(5), standards(5) Page 7 sched_setparam - set scheduling parameters Synopsis #include int sched_setparam(pid_t pid, construct sched param *param); Description The function sched_setparam() sets the process schedule parameters specified by pid to the values specified by the sched_param structure referenced by the parameter. Errors No errors were defined. Standard For sem_timedwait(), see standards(5). Otherwise, thereÂ² which is an exceptional condition Ã¨ specific to the file type. If the traffic light was not removed with a successful call to sem_unlink(3C), sem_close() does not affect the traffic light status. If there is no dimension modifier, the corresponding argument must be a pointer to int. Examples Example 1 The call: int i, n; float x character name[50]; n = scanf("%d%f%49s", &i, &x, name); with the input line: 25 54.32EÃ ④ ÂÂ1 The hamster assegnerÃ a n the value 3, a i the value 25, a x the value 5.432, and the name will contain the string Hamster. Conversion Specifications Each conversion specification is introduced by either the % character or the %n$ character sequence, after which the following elements are displayed in sequence: An optional character to suppress assignments *. Cf. random (7D). The function sccanf() reads from the string s. Errors For conditions in which the scanf() functions do not work and may not work, refer to fgetc(3C) or fgetwc(3C). In this case, buf[0] is On zero. XI must be initialized before being called up. These conversion specifiers correspond to any subject sequence accepted by Strtod (3C), including the INF, INFINITY, NAN and NAN (N-CHAR-Sequence) modules. Scanf, Scanf, sscanf, vscanf, vfscanf, vsscanf - convert formatted input Synopsis #include int scanf(const char *restricted format...); int fscanf(FILE *restricted stream, const char *restricted format...); int sscanf (frame constant *restricts s, frame constant *restricts format...); #include #include int vscanf(const char *format, va_list arg); int vfscanf(FILE *stream, const char *format, va_list arg); int vsscanf(char *s constant, char *format constant, va_list arg); Description The scanf() function is read from the stdin input stream standard. Return Values If successful, sem_kill() returns 0, otherwise it returns Â ④ Â Â1 and sets the error to indicate the error. If the Ã¨ socket is listening, it is marked as readable if a request for an incoming connection has been received and a call to the accept function is completed without blocking. If the shared argument has a non-zero value, the traffic light is shared between the processes; in this case, any process that can access the sem traffic light can use sem to perform sem_wait(3C), sem_trywait(3C), sem_post(3C), and sem_kill(3C) operations. The qeconvert(), qfconversion(), and qgconvert() functions are quad-precision versions of these functions. Page 11 filctl_init, filctl_lookup, filctl_exit, filctl_start, filctl_stop - prevention control Synopsis cc [flag... It behaves as pselect() does when sigmask Â¬ a null pointer. If a read error occurs, the error indicator for the stream is set, EOF is returned, and the error is set to indicate the error. This traffic light can be used in subsequent calls to sem_wait(3C), sem_trywait(3C), sem_post(3C), and sem_close(3C). In some cases, scanf() may need to read several extra characters beyond the end of the input element to find the a corresponding sequence. Each one expects, as arguments, a control string format described below and a series of pointer topics indicating where the IL Input must be stored. The value of the SCHED_PRIORITY member in the Sched_Param Ã structure¨ any integer within the inclusive priority range for the current process planning policy specified by PID. The FSCanf () and Scanf () functions can mark the ST_ATIME field of the file associated with the stream for update. On successful completion, objects that are pointed by Readfs, witefs, and ERRORFDS arguments are modified to indicate which file descriptors are ready to read, ready to write, or have an error condition waiting, respectively, and return the total number of ready descriptors in all output sets. EPERM The request process does not have permission to set planning parameters for the specified process or does not have the appropriate privilege to invoke Sched_separam (). Conversion characters The following conversion characters are valid: D corresponds to an optionally signed decimal number, whose format Ã¨ the same as expected for the sequence of the subject of STRLOL (3C) with the value 10 for the base argument. Attributes See attributes (5) for descriptions of the following attributes: Interface Stable Commission MT-LIGILSAFE Standard See also opendir (3C), Readr (3C), Rewinddir (3C), Telldir (3C), Attributes (5), Standards (5) Page 18 Select, PSelect, FD_SET, FD_CLR, FD_ISSET, FD_ZERO - I / O synchronous Multiplexing multiplexis #include int Select (int NFDS, FD_Set * Restrict readfds, fd_set * Limit witfds, d_set * Limit Errors, Struct Timeval * limit timeout); int PSelect (int NFDS, FD_SET * limit readfds, fd_set * limit witefds, fd_set * limit errors, cost struct timespec * limit timeout, const sigset_t * restrict Sigmask); void fd_set (int fd, fd_set * fdset) void fd_clr (int fd, fd_set * fdset); fd_isset int len len itassap onos izziridni iuc i elif led irottircsed tes i animase)(tceleSP enoiznuf aL enoizircseD ;)tecidf * tes_df(orez_df diov ;)tesdf * tes_df ,df The WriteFDS and ErrorFDS parameters to see if some of their descriptors are ready for reading, they are ready for writing or have an exceptional condition waiting, respectively. Any final white space (including the characters of the new) is left unread if not combined by a conversion specification. Errors The Sched_setapram () function fails if: Einval One or more of the required schedule parameters is outside the interval defined for the specified PID planning policy. With this definition, Scanf () you need to read only a character beyond the end of the input article. The masks of the file descriptor of the FD_SET type can be initialized and tested with the Macros FD_CLR (), FD_ISSET (), FD_SET () and FD_ZERO (). Following a call to sem_open () with name traffic light, the process can refer to the traffic light associated with the name using the address returned by the call. The effects of the sem_close call () for a unnamed traffic light (one created by sem_init (3c)) is not defined. The GConvert () function converts the value to an ASCII string terminated NULL in BUF and returns a pointer to BUF. Upon successful completion, the SELECT () function could change the object pointed from the TIMEOUT argument. If the conversion ends to a conflicting input, the offensive input is left unread in the input. I use the sem_close function () should not be called for a traffic light without the initialized name from sem_init (3c). Return values The SEEKDIR () function does not return any value. If this object does not have an appropriate type, or if the result of the conversion cannot be represented in the space provided, the behavior is not defined. The specifiers E, F and G correspond to the values of the hexadecimal floating point only in C99 / SUSV3 mode (see standard (7)), but one always matches values of the hexadecimal floating point. A, E, F, G corresponds to an optionally signed, infinite or Nan floating-point number whose format is the same as for the STRTOD (3C) subject sequence. (3C) &fdset) Sets the bit for the file descriptor fd in the file descriptor set fdset. The initialization function lcong48() allows the user to specify the initial Xi the multiplier value a, and the addend value c. Attributes See attributes(5) for descriptions of the following attributes: Interface Stability Standard MT-Level Safe See Also rand(3C), attributes(5), standards(5), random(7D) Page 17 seekdir - set position of directory stream Synopsis #include #include void seekdir(DIR *dirp, long int loc); Description The seekdir() function sets the position of the next readdir(3C) operation on the directory stream specified by dirp to the position specified by loc . The name argument conforms to the construction rules for a pathname. The resolution of the timeout is the resolution of the CLOCK_REALTIME clock. The sem_open(3C) function is used with named semaphores. The length of the item read is limited to any specified maximum field width, which is interpreted in either characters or bytes depending on the conversion character. If the value of pid is negative, the behavior of the sched_setparam() function is unspecified. z Specifies that a following d, i, o, u, x, X, or n conversion specifier applies to an argument with type pointer to size_t or the corresponding signed integer type. Errors The sched_get_priority_max() and sched_get_priority_min() functions will fail if: EINVAL The value of the policy parameter does not represent a defined scheduling policy. Return Values If successful, sem_post() returns 0; otherwise it returns ¢ÂÂÂ1 and sets errno to indicate the error. The initializer function srand48() sets the high-order 32 bits of Xi to the 32 bits contained in its argument. If sem is locked, then the value returned by sem_getvalue() is either zero or a negative number whose absolute value represents the number of processes waiting for the semaphore at some unspecified time during the call. noitcnuf) (pukool_ltcdehcs ehT .egap launam siht debircsed snoitcnuf your eht lla rof degnahc sah %% reificeps noisrevnoc your eht roivaheb ehT Seton .atad eht refer desu retniop a snruter DNA daerht gnillac eht rof lortnoc noitpmeerp sezilaitini noitcnuf) (tini_ltcdehcs ehT .yllacitamota Dedda Eb Lliw Hcuhw, Edoc Retcarahc LLU ETHEUQUS EGRAPS, Rahc fogria and fottruahc Tsrif EHT AHT ETHEz Auto Deziliity TCEJBO TCHBO T_ETATSBM and YB DebirCSED ETTA, NOITCNUT eta rtnema htwa r, rotpircsed eti Dilav A ton from df Roze Ro Naht Rauqe Ro Naht Retajg Rew ethtap lawawa df etheht foehcstes_dehcs et Debi RCSED DNA> H.dehc
